

Health Robotics Re-Acquires CytoCare's European Rights from B. Braun Melsungen AG for Undisclosed Consideration

Bozen, Sud-Tirol, Italy – May 17th, 2010. Health Robotics and B. Braun Melsungen AG today announced that in exchange for undisclosed consideration, Health Robotics has re-acquired from B. Braun the exclusive marketing, sales, installation, implementation, interface, manufacturing, and technical support European rights for CytoCare, a robot designed to manufacture chemotherapy and hazardous IV Admixtures, and which rights B. Braun had previously acquired from Health Robotics in 2007 and 2008. This amendment to the prior agreements includes the transition of all CytoCare customer contracts from B. Braun to direct Health Robotics' technical support starting on July 1st, 2010.

“Health Robotics’ current global dominance of the IV Robotics industry is in great part due to the support we received from B. Braun since 2006. We learnt a lot from B. Braun through the last 42 months, especially in the area of flexibility supporting many different IV consumables, which has improved our robots not only for B. Braun’s IV Bottles but also for Asia Pacific-based IV consumables. We will always owe a debt of gratitude to B. Braun and we hope to continue with B. Braun the joint cooperation in IV consumables, as we expand Health Robotics to directly market and support selected European countries in the next development phase for the company,” stated Werner Rainer, Health Robotics’ CEO.

In addition to the above mentioned undisclosed consideration, Health Robotics has agreed with B. Braun to continue to support B. Braun’s market leading IV consumables such as Ecoflac Plus bottles, Easypump elastomeric devices, Excel and PAB I.V. Bags, Omnifix syringes, and TEC 1000 syringe caps, the latter being the only syringe cap supported by Health Robotics for its other, non hazardous IV robot: i.v.STATION.

“We also learnt a lot from this experience, especially as we expand B. Braun’s horizons from its market-leading position in IV Therapy and Nutrition products into the complexity of Clinical IT solutions, requiring extensive Project Management skills at customers’ locations,” stated Dr. Torsten Doenhoff, B. Braun’s Vice President Marketing & Sales Drug Admixture and Application Systems.

About B. Braun Melsungen AG:

B. Braun - Sharing Expertise. B. Braun supplies the global healthcare market with products for anaesthesia, intensive medicine, cardiology, extra corporeal blood treatment and surgery, as well as services for hospitals, general practitioners and the homecare sector. Through dialogue with those who are using B. Braun’s products, the company is continually gaining new knowledge which it incorporates into product development. In this way, the company contributes with innovative products and

services towards optimizing working procedures in hospitals and medical practices all over the world and improving safety – for patients, doctors and nursing staff. With nearly 40,000 employees in 50 countries, B. Braun generated sales in 2009 of more than EUR 4bn. For more information please visit <http://www.bbraun.com>

About Health Robotics:

Health Robotics is the undisputed global leading supplier of life-critical intra-venous medication robots, providing healthcare facilities in 5 continents with robotics technology and software automation solutions. Its world-leading solutions CytoCare™ [hazardous IVs], i.v.STATION™ [non-hazardous IVs], i.v.SOFT™ [workflow engine for manual compounding, powered by MEDarchiver], and TPNstation™ [totally-automated parenteral nutrition] have and will greatly contribute to ease hospitals' growing pressures to improve patient safety, increase throughput and contain costs. Through the effective and efficient production of sterile, accurate, tamper-evident and ready-to-administer IVs, Health Robotics' solutions help hospitals eliminate life-threatening drug-exchange errors, decrease other therapy oversights and sterility risks, work more efficiently, reduce waste and controlled substances' diversion, and diminish the gap between rising patient volume/acuity and scarce nursing and pharmacy staff.
